

AI CALORIE TRACKING · GLOBAL MARKET SNAPSHOT

A \$14B+ wellness frontier where AI is the new differentiator.

The AI calorie tracking and digital nutrition app market is growing at double-digit rates, fueled by GLP-1 adoption, wearables integration, and consumer demand for personalized — not generic — guidance. Below: the numbers KkaloAI is launching into.

DIET & NUTRITION APPS TAM

\$6.94B

2026 forecast

From \$2.14B in 2024 · 13.4% CAGR baseline

CALORIE COUNTER APPS TAM

\$4.14B

2026 segment value

Reaches \$8.41B by 2034 · 9.27% CAGR

FITNESS APPS COMBINED TAM

\$12.12B

2025 actual

\$33.58B by 2033 · 13.4% CAGR

APPS ADDING AI FEATURES

50%+

By end of 2025

AI personalization is now table stakes

Market Trajectory 2024 — 2035

Conservative

Aggressive

Global Diet & Nutrition Apps Market — Revenue Forecast

Two scenarios from the most-cited research firms. Both project sustained double-digit growth through 2035.

Regional Revenue Share, 2025

North America leads; Asia-Pacific is the fastest-growing region.

Platform Mix & Audience Signals

Platform Revenue Share (2025)

iOS leads in revenue, Android leads in volume.

Device Type

Smartphone is overwhelmingly dominant.

App Category Demand

Exercise & weight loss is the #1 segment.

English-Speaking Target Markets

Estimated Addressable Users (Diet & Nutrition Apps, 2026)

Active health-app users in KkaloAI's primary launch geographies. Estimates derived from Statista and population × penetration.

Top Players — Reach & Revenue

MyFitnessPal still dominates revenue, but its YoY decline (–5.7%) opens a window for AI-native challengers.

Strategic Insights for KkaloAI

Tailwind: GLP-1 user base (Ozempic / Wegovy) is projected at 24M+ Americans by 2030. None of the top 3 incumbents have a dedicated GLP-1 mode. KkaloAI's **GLP-1 Support Mode** is a defensible wedge.

Incumbent fatigue: MyFitnessPal revenue fell 5.7% in 2025 despite 220M registered users. Reviews cite paywall aggression and stale UX — exactly what KkaloAI's **Transparent Pricing** targets.

Native sync wins: Health Connect adoption on Android crossed 100M devices. KkaloAI's two-way sync is a meaningful moat against apps that still treat health data as one-way export.

Underserved niche: 1 in 10 women of reproductive age has PCOS, yet zero top-10 calorie apps offer hormonal-balance tracking. KkaloAI's **PCOS Mode** turns a feature into a marketing channel.

Pricing leverage: ARPU for nutrition apps averages \$35-60/year. A **no-payment-required 7-day trial** tied to anonymous auth removes the #1 install-to-trial drop-off.

AI is now table stakes: 50%+ of new entrants ship AI features in 2025. The differentiator isn't *having* AI — it's **user-controllable AI** (the 0.5×–2.5× confirm-and-adjust slider).
